
VICTOR HALF-MINUTE PUMP

Is the quickest and most powerful hand pump made. It has been on the market longer than any other triple compound pump, and has reached the pecfection that only years of continuous manufacture can give.

Because of the features named above, it was selected by the Russian army; and later, after comparative tests, by the Signal Corps for the U. S. Aerial service.

The selected cup leathers trap the air, as it progresses in three-stage compression.

It is delivered to the tire on the down stroke, when the operator can "sit on the handle"

Packings are guaranteed. The brass tubes are both screwed and soldered into the base.

DEALERS

You can build a permanent trade only on quality. There is a big demand and a good margin of profit connected with the sale of the Victor. Write for price or name of your favorite jobber.
